Microformats and semantic XHTML add semantics to web pages while taking advantage of the existing (X)HTML infrastructure. This approach enables new applications that can be deployed smoothly on the web. But there is currently no way to describe rigorously this type of markup and authors of web pages have very little help for creating and encoding semantic markup. A language that addresses these issues is presented in this paper. Its role is to specify semantically rich XML languages in terms of ...

Alexis Cabeda Faria, Joao B. S. de Oliveira

October 2006 **Proceedings of the 2006 ACM symposium on Document engineering**
DocEng '06

Publisher: ACM Press

Full text available: pdf(616.19 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Adaptive documents undergo many transformations during their generation, including insertion and deletion of content. One major problem in this scenario is the preservation of the aesthetic qualities of the document during those transformations. As adaptive documents are instances of a template, the aesthetic quality of an instance with respect to the template could be evaluated by aesthetic measures providing scores to any desired quality parameters. These parameters measure the deviation of the ...
